

Do not work FOR us, Work **WITH** us!

The idea is to have a partner who will work WITH us, not FOR us just as an engineer, who is passionate enough to take Glabbr forward, rather than being just a techie.

Software Developer - Angular

Are you a programmer and designer blended in one? Does it motivate you what learning you would garner? Do you believe that you can take the GLABBR to the next level? If yes, welcome home!

General Instructions for the coding battle:

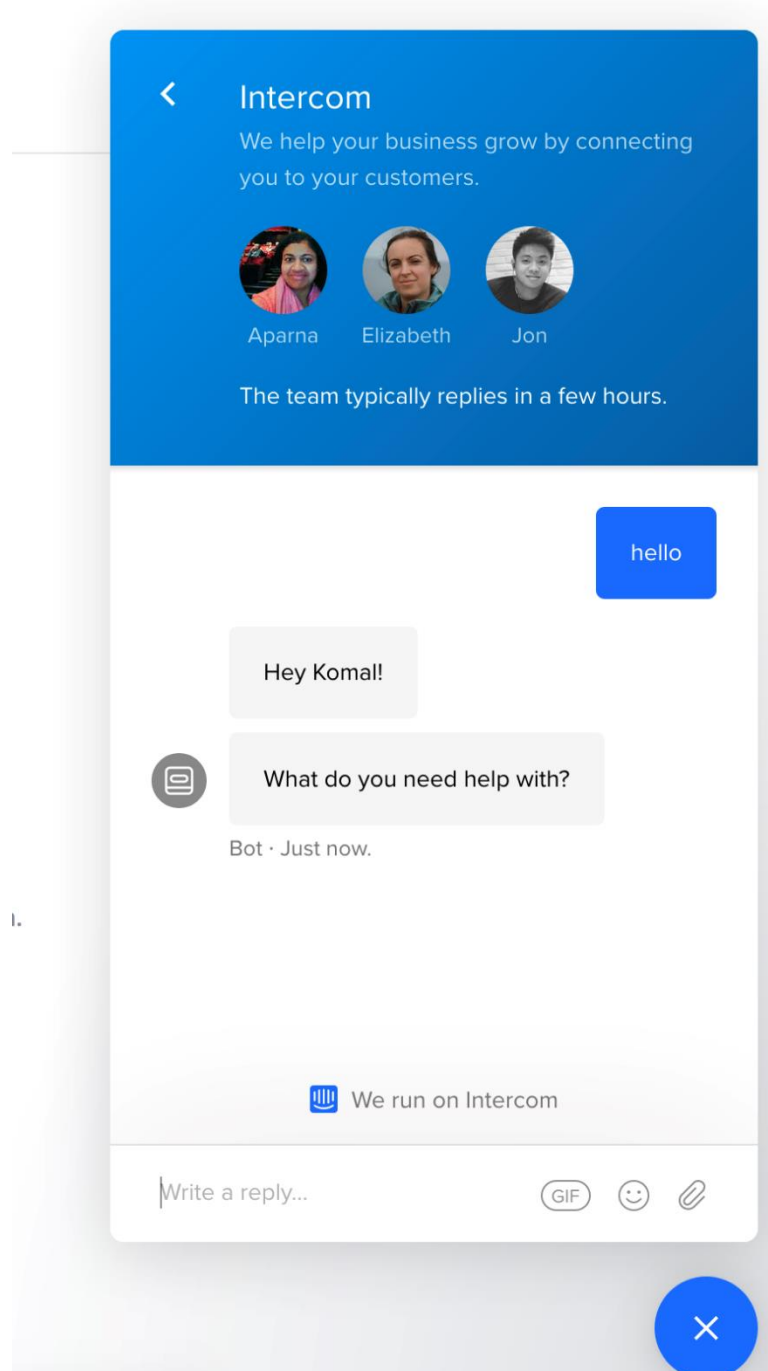

1. You must complete and send your test within 3 days.
2. Follow angular material design patterns and use of external libraries are allowed.
3. You can use internet as your source of inspiration.
4. Should use comments in code for others to understand.
5. Make sure to write code with minimum time and space complexities.
6. Writing unit test cases for the written code would be an added advantage.
7. Strictly follow MVC architecture.

CODE CHALLENGE

Create a chat component with UI as following in Angular 2+. You are free to use external libraries like bootstrap etc. for the UI.

Minimum working functionality should be:

- Send message
- Send message should go on the right of the chat list
- Received messages should go on left side (its ok to mock/hardcode few received messages)
- UI as shown in the screenshot below (hardcoding of UI elements like profile pic is allowed)

HOW TO SUBMIT YOUR CODE?

Kindly complete the code within 48 hours from the time you get this code challenge and submit on your personal GIT repository with the link and send an email on people@glabbr.com about the same.

*****ALL THE BEST *****
